plt.show()
```

For our third model we will be adding layer to the previous model.

2.4 MULTI-LAYER LOGISTIC REGRESSSION

Insert neccessary modules

```
[96]: import tensorflow as tf
from tensorflow import keras
from tensorflow.keras import layers
from tensorflow.keras.models import Sequential
from tensorflow.keras.layers import Dense, Dropout
from tensorflow.keras.wrappers.scikit_learn import KerasClassifier
from tensorflow.keras.optimizers import Adam
from sklearn.model_selection import GridSearchCV
```

Like previous model, we will once again define a custom garbage collector

```
[ ]: import gc

class MyCustomCallback(tf.keras.callbacks.Callback):
    def on_epoch_end(self, epoch, logs=None):
        gc.collect()
```

We will create a model creator function that takes 2 inputs: learning rate and number of units

```
[97]: def create_model(learning_rate, neuron1):
        model = Sequential()
        model.add(Dense(neuron1, input_dim = 130, activation = 'swish'))
        model.add(Dropout(0.5))
        model.add(Dense(neuron1, input_dim = neuron1, activation = 'swish'))
        model.add(Dropout(0.5))
        model.add(Dense(1, activation = 'sigmoid'))

        adam = Adam(lr = learning_rate)
        model.compile(loss = 'binary_crossentropy', optimizer = adam, metrics = [
            ↪keras.metrics.AUC()])
        return model
```

Use constructor to classify model for grid search

```
[98]: model = KerasClassifier(build_fn = create_model, verbose = 1)
```

We will tune learning rate and number of units in each layer

```
[99]: learning_rate = [0.001, 0.01, 0.1]
        #dropout_rate = [0.3, 0.5, 0.7]
        neuron1 = [64, 512]

        # Make a dictionary of the grid search parameters

        param_grids = dict(learning_rate = learning_rate, neuron1 = neuron1)
```

Like the previous model, this would also take many hours to perform grid search so we will tune parameters only on a subset of data

```
[100]: _, X, _, Y = train_test_split(X_train, Y_train, random_state=42,
            ↪stratify=Y_train, test_size=100000)
